## PRODLIB

ProdLib is a platform for distributing digital product information libraries for architects and structural engineers. The libraries contain BIM and CAD models, product information and other documents – all organized and up-to-date.

Through ProdLib, your products will be used in top design software such as Revit, AutoCAD and ArchiCAD. Architects and structural engineers will use them in their design projects internationally. Doesn't that sound good?

Who decides which products will be used in construction?  
– Architects and structural engineers, commonly.

It's true. And therefore, ProdLib works as a marketing channel for your company. We bring your products to the software of designers, so they can create buildings with them. Products used in the design phase will most likely be used in the construction also. ProdLib is a convenient way to increase your brand visibility and to market your products.

## MARKETING BENEFITS

Architects and structural engineers need BIM and CAD models to do their job. Yet they don't want to spend time scrolling through the web for those models. ProdLib gives designers everything they need – in one program.

ProdLib connects your company with architects and structural engineers. Users worldwide can see your brand and use your products in their projects. The ProdLib program is easy and free to use and the user base is growing continuously.

## CONNECT WITH DESIGNERS

As a ProdLib partner you will receive information about the usage of your products. You can see how designers insert your products in their projects by region or time period.

## GET DATA

The Web Library is a free web-based tool for browsing ProdLib content and getting an overview of the service itself. Your product catalogue will be available in there also.
